

WE BELIEVE IN A
SAFE AND ACCESSIBLE HOME
FOR EVERYONE

EXPERT IN SAFETY AND SECURITY

For years, Smartwares has been an expert in all things related to safety, security and functional lighting. Our aim is to create products to make life in and around home more pleasant, safe, secure and comfortable. With a broad range in security and safety, fire protection, home automation and lighting, Smartwares provides many accessible products that are affordable, reliable and easy-to-use for everyone. We pride ourselves to be innovative, solution-oriented and always thinking about the 'smarter way of life'.

Safety first!

All of our products have clear instructions, are carefully tested and meet the standards of various European inspection agencies such as KEMA, TÜV / GS and EMC / CE.

A home should be safe and protected nowadays, and not forget to mention: comfortable. Our products provide all possible solutions to create just that. Without any difficult installation guides and hard to achieve setups. And, very important, products that have apps that run on safe European servers, which are daily protected and secure and updated by us personally.

We take safety very seriously.

A smart home for everyone

We specialize in being one of the first suppliers of an entry level domotica system and products. What does this mean? We have multiple easy-to-use smart home products that can be monitored, controlled and analyzed by using a smartphone. Think of fire safety detectors, cameras and light switches that can be monitored and controlled from wherever you are!

Our smart products are developed and supported by our own R&D Center in Noordwijk, once started from an incubation program at the European Space Agency (ESA). Our team of specialists has developed multiple HomeWizard apps that help using our smart products. The apps are free and are compatible with iPad, iPhone or an Android tablet or smartphone.

Our assortment consists of:

Smart home systems and products | Alarm systems | Door chimes and intercoms
Security cameras | Functional and decorative lighting

THAT'S SMART THINKING.
